    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                       N_Geneseq_032802:*

The DNA construct is also useful for delivering a gene product to tissues selected from intestinal epithelium and the lateral hypothalamus, by transfecting an organism, or a gametic or embryonic form of such an organism, with the construct. The DNA construct is also useful to identify cells capable of mediating expression from the chosen GLP-2R promoter, to identify regions of the GLP-2R promoter that are functional in a given cell type, and to screen for agents that modulate expression from the GLP-2R promoter. It can be used to map functional regions of the GLP-2R promoter, and for screening agents that modulate the function of GLP-2R promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents the 5' flanking and 5' UTR of the murine glucagon-like peptide-2 (GLP-2) receptor gene. This sequence may be used in the DNA construct of the invention, such that it is linked for expression with a heterologous gene of interest. This construct

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAQ36051 standard; cDNA; 1199
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (i.e. 50% formande, 5 x SCC). The promoter sequence from the human nov gene, localised to a 2.2kb pstI-HindII fragment and comprising the 283bp upstream of the start of exon 1 is specifically disclosed. The promoter sequence corresponds to sequence xxXIII which is given as three separate fragments in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleotide sequences hybridising to regions of chicken useful as probes for detecting complementary sequences evaluate development and/or differentiation of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO9300430-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  24-MAY-1993
                                                                                                                                                                                                                                                                                                                                       The human nov promoter contains several consensus sequences for different transcription factors such as NF1, API and Spl. It also comprises a sequence of 20 repeats of the TG motif ( a possible polymorphic marker). See also AAQ36050 and AAQ36052.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention includes nucleotide sequences which can hybridise to all or part of the chicken nov gene under stringent conditions (i.e. 50% formamide, 5 x SCC).                                                                                                                                                                                                                                                                                                                               This polynucleotide comprises the 3' portion of a cDNA clone, designated AS63_29 (see also AAV30917), that codes for a novel human secreted protein (see AAW58381). AS63_29 was isolated from a human foetal brain cDNA library using methods selective for cDNAs that encode secreted proteins. The clone is deposited in composite clone ATCC 98232; an oligonucleotide (see AAT99723) is designed to isolate the clone from the composite. Novel cDNA clones (see AAV30916-32) coding for human secreted proteins (see AAW58580-90) are claimed. These can be used for recombinant production of the secreted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid encoding secreted protein from human cells - useful, e.g. as immunomodulator, antitumour agent, promoters of tissue growth, haemostatic and thrombolytic agents etc.

                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                              proteins AAB90667 - AAB90750. The cDNA clones are isolated from various tissue types, and may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate protein expression. The polypeptides and nucleic acids may be used as nutrients or to modulate cytokine and cell proliferation/differentiation activity and may also be involved in modulation of the immune system. The cDNA sequences, proteins, their agonists and/or antagonists exhibit haematopoiesis regulating activity; tissue growth activity; activin/inhibin activity; chemotactic/chemokinetic activity; haemostatic and thrombolytic activity; receptor/ligand activity; anti-inflammatory activity; haematopoiesis activity, cadherin/tumour suppressor activity; and/or tumour inhibition activity. Included in the invention are probes represented in AAF98490 - AAF98572 which are specific for the cDNA clones

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, haematopolesis activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
Mus musculus.

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,

                                                                                                                                                                                                                                                 ARK54951 to ARK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic c activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and c treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased cc expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to c supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting CC the nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells.                                                                                                                                                                                         CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) corrections and polynucleotides may be used in the prevention, diagnosis and cax they may be used to treat discorders associated with inappropriate (I) expression. For comple, they may be used to treat discorders associated with decreased comple; they may be used to treat discorders associated with decreased comple; they may be used to treat discorders associated with decreased comple; they may be used to treat discorders associated with decreased comple; the patients own production or deletions in a patient's genome complement the patients own production of (I). Additionally, (I) complement the patients own production of (I). Additionally, (I) concerned and creat immune/haematopoietic decided to prevent, complement to a host cell and culturing the cell to express the content of the present immune/haematopoietic antigen genomic concerned and cancer metastases of haematopoietic antigen genomic concerned and concerned invention. AAK54942 to AAK87493 and AAM82169 concerned and the present invention. AAK54942 to AAK87493 and AAM82169 concerned and the present invention. AAK54942 to AAK87493 and AAM82169 concerned and the present invention. AAK54942 to AAK87493 and AAM82169 concerned and the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammatopoiesis regulating activity tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic-derived cells acceptable sequences from the present invention. AAK84942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                 AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 8095 BP; 2662 A; 1135 C; 1557 G; 2741 T; 0 other;

A259 is homologous with the alphal and alphal0 integrin subunits and is overexpressed in fibrosis. A259 is implicated in regulation of proliferation, differentiation and/or function of many different cell types. Inhibitors of A259 activity are useful for the treatment of liver disease, particularly fibrosis, and also fibrosis in other organs (specifically lung and kidney). In addition, A259 can be used for treatment and prevention of cancer, osteoporosis, acute myeloid of treatment and prevention of cancer, osteoporosis, acute myeloid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel protein (I) of the stomatin family which can be used in the treatment of pain. (I) is involved in transduction of mechanical stimuli to a receptor potential, particularly in perception of pain and contact, so when the function of (I) is reduced, so will be sensitivity to pain. (I) and other members of the stomatin family, are used as target proteins for treatment of pain, and especially: (1) for the development of analgesics and anesthetics, e.g for treating allodynia; (2) for constructing genes and vectors, particularly for pharmaceutical development; (3) for developing diagnostic kits for predicting an individual's response to different analgesics/anesthetics or disposition to side effects, and (4) for determining disposition to disease. This sequence encodes the murine stomatin protein described in the method of the invention.

```
Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -
```

Disclosure; SEQ ID NO 21626; 3071pp + Sequence Listing; English.

amino acid sequences given in AAM82170 to AAM81921. (I) have cytostatic cartivity, and can be used in gene therapy and vaccine production. (I) cyroteins and polynucleotides may be used in the prevention, diagnosis and carament of diseases associated with inappropriate (I) expression. For cerample, they may be used to treat disorders associated with decreased cexpression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) complement the patients own production of (I). Additionally, (I) complement coids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, complement coids into a host cell and culturing the cell to express the complement of the proteins and polynucleotides may be used to prevent, complement and cancer metastases of haematopoietic cantiden genomic concers and cancer metastases of haematopoietic antigen genomic concers from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention. AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic

                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Homo sapiens chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appears completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  However, it should not be assumed that this clone will be sequenced to completion. * NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently consists of 51 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          as soon as it is available and the accession number will be preserved.

```

```
consists of 64 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that

NOTE: This is a 'working draft' sequence. It currently consists of 42 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: Estimated insert size may differ from sequence length
